

HOWTO Download *.ipynb Documents from Remote Servers

Thuan L Nguyen, PhD

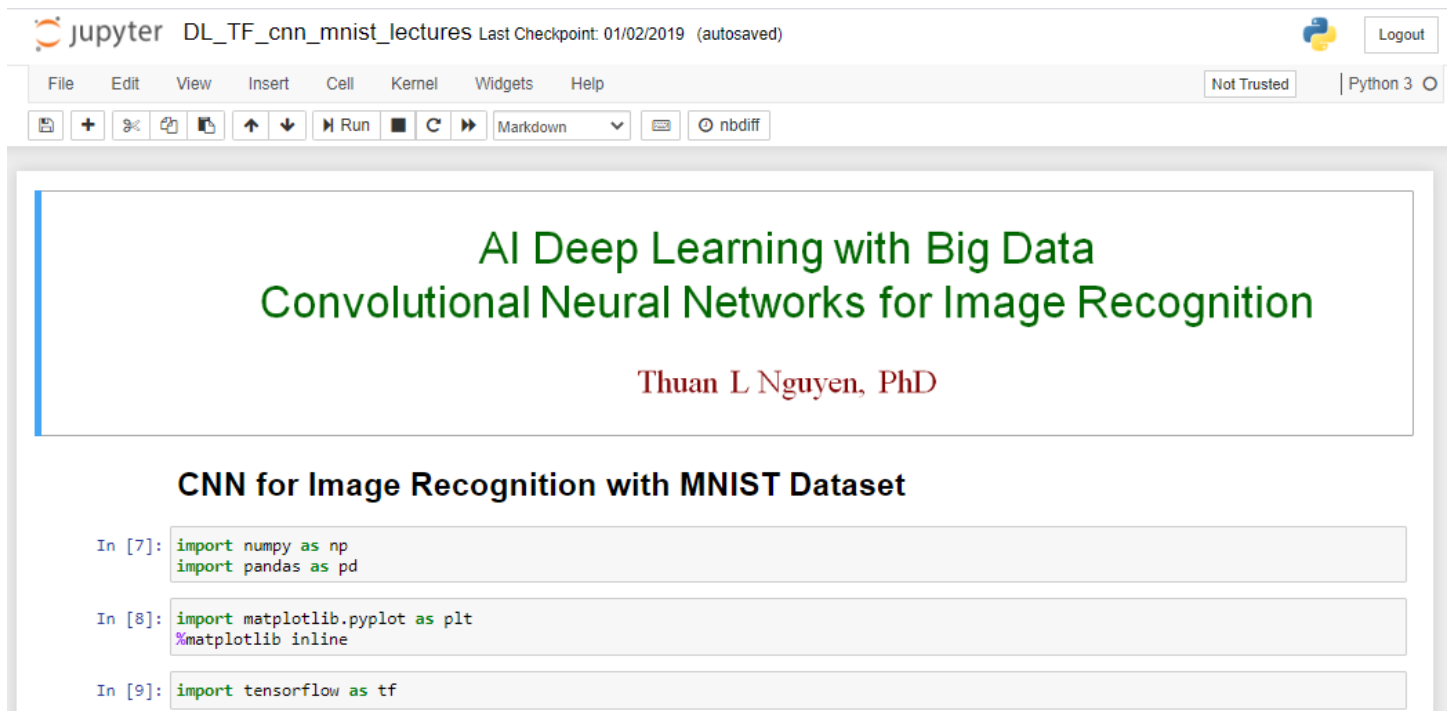

1. Overview

The user of remote deep learning servers setup in the cloud (on the Google Cloud Platform, GCP) can work on Jupyter Notebook documents (created and saved in remote servers) from their local computers.

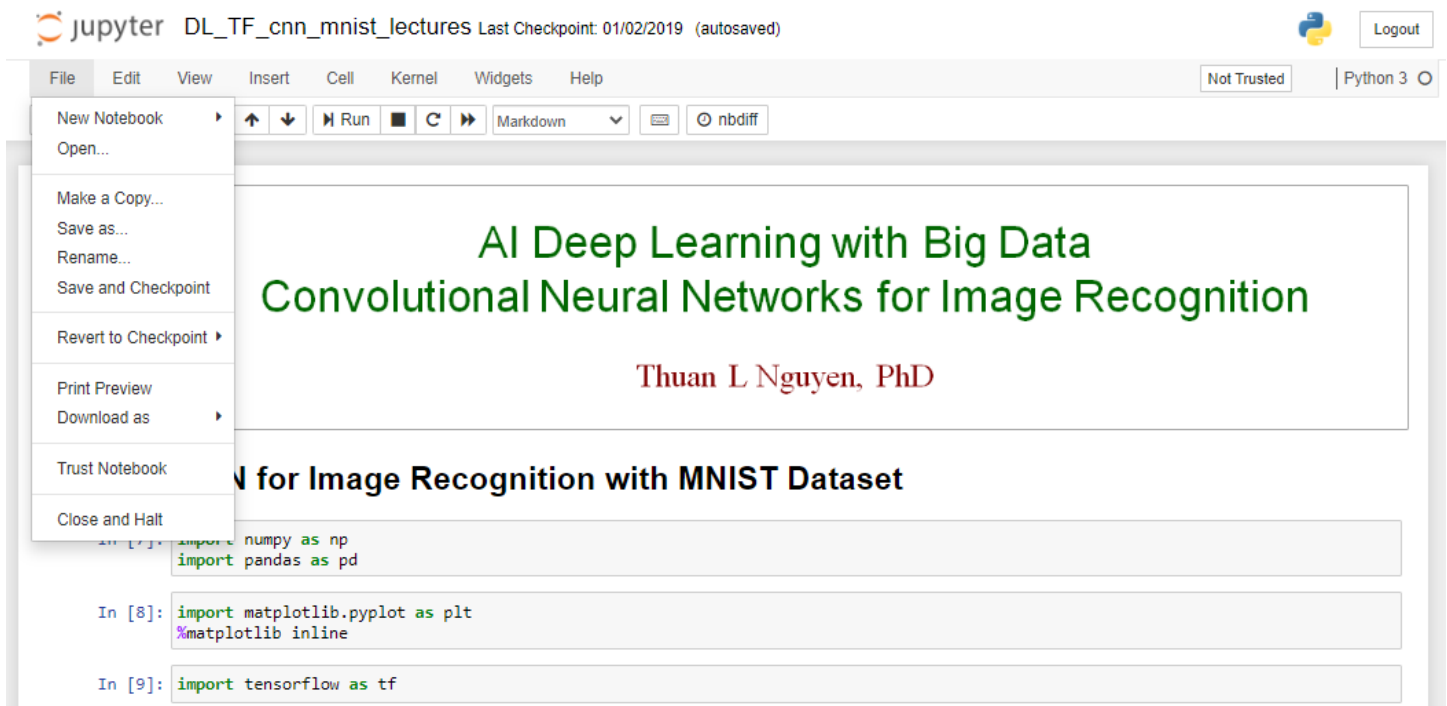

When the user has finished working on a Jupyter Notebook document, i.e., *.ipynb documents (created and saved in remote servers), he/she can download the document to his/her local computer.

2. Download Jupyter Notebook Documents from Remote Servers

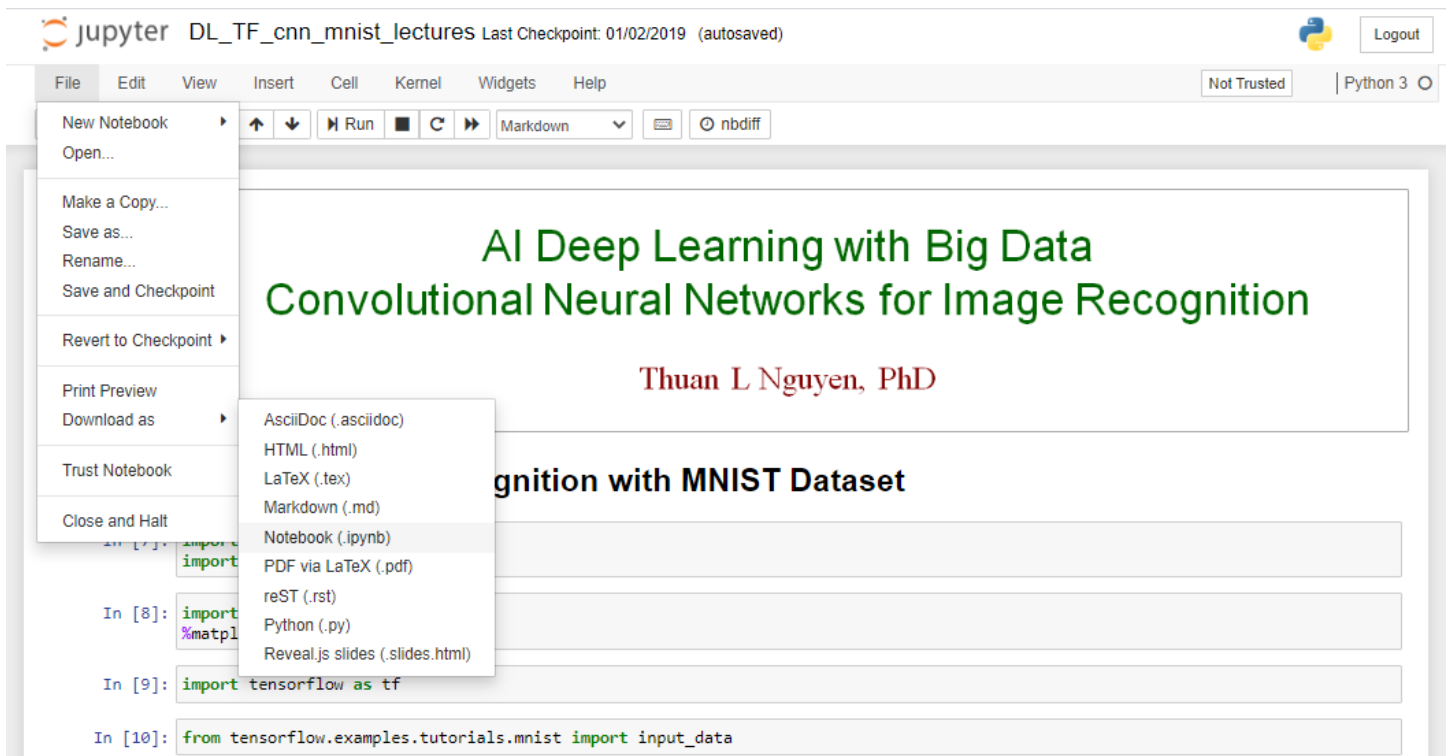

2.1 Open the document (in Jupyter Notebook)

Click **File** to open a drop-down menu

Click **Download as** to open another drop-down menu

Click to select **Notebook(.ipynb)** to download the Jupyter Notebook document.
(**NOTES:** The file is downloaded into the folder “*Downloads*” in MS Windows OS)
