

Setting up a GCP Account and Creating a Project in GCP

Steps to Set Up My GCP Account

- *I opened my browser and went to the Google Cloud Platform website.
- *I clicked on “Get started for free” to begin setting up my account.
- *I used my Gmail account (oluwadarasimiobasa@my.unt.edu) to sign in.
- * I selected my country from the dropdown list (United States) and confirmed it.
- * I selected my country from the dropdown list (United States) and confirmed it.
- *Even though there’s a free trial, I had to add a credit or debit card. They said they wouldn’t charge anything unless I go over the free-tier limits.
- *I entered my payment details and verified my billing info. GCP put a small \$1 hold on my card, which they refunded later.
- *After reviewing everything, I clicked “Start My Free Trial,” and that was it! I was redirected to the GCP dashboard, and my account was set up.

I took a screenshot of my GCP dashboard to show that my account is successfully set up.

Steps to Set Up My GCP Project

Project Name: Simi Obasa GCP

Project ID: ADTA5240ooo

*After I logged into my GCP account, I went to the GCP console by clicking on <https://console.cloud.google.com/>.

*At the top of the page, there's a dropdown that says "Select a Project." I clicked on it and then clicked "New Project" to create one from scratch.

*I was asked to give my project a name, so I typed in a name that made sense for my homework. GCP automatically gave me a Project ID, but I could have changed it to Simi Obasa GCA

*Once I had everything filled out, I clicked the "Create" button, and GCP set up the project for me.

*When the project was done being created, it took me to the project dashboard where I could see both the Project Name and Project ID.

Below is a screenshot documenting that i have successfully created a GCP Project.
